NOTE: Installation and maintenance are to be performed only by qualified personnel who are familiar with local codes and regulations, and experienced with this type of equipment.

Caution: Sharp edges and coil surfaces are a potential injury hazard. Avoid contact with them.

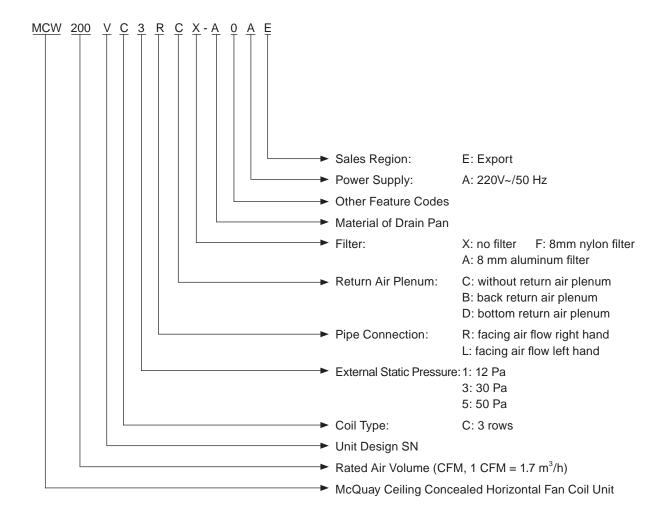

Warning: Moving machinery and electrical power hazard. May cause severe personal injury or death. Disconnect and lock off power before servicing equipment.

Nomenclature

Valve Nomenclature

Features

Compact

- Light-weighted, good-looking appearance, and compact and solid structure.
- 235 mm height, allowing installation on the ceiling with a limited space.

Low-noise

- Low-noise motor for driving the low speed fan with a wide impeller; strictly tested before delivery.
- Precise distance between the impeller inlet/outlet and the heat exchanger for more reasonable air flow distribution.
- Highly efficient sound-absorbing and heat-preserving materials inside to minimize noises produced by the unit.

Reliable

- Single-phase capacitor motor with the protection grade IP20 and insulation grade B to ensure operation safety.
- Permanently lubricated and sealed ball bearing with high precision, which is provided by internationally famous brands and receives processing including hardening and tempering as well as chroming.
- Motor power outlet wires protected by metal hoses to ensure its durability.
- Working pressure up to 1.6 MPa and test pressure up to 2.0 MPa for the heat exchanger to endure high pressures and prevent leakage.

High Efficiency

- Heat exchanger with the high-quality mechanically expanded copper pipe and hydrophilic aluminum fins to ensure high efficiency.
- Intensified air supply using a large air flow fan with a wide impeller to maximize the heat transfer performance.
- Precise matching of the fan and motor to guarantee the maximum cooling capacity but a low power input.

Flexible

- Multiple external static pressures designed based on the unit's cooling capacity, meeting the air supply requirements at different distances.
- Optional bottom return air plenum or back return air plenum with support for onsite changes, featuring time saving.
- Variable accessories for more options.

Anti-leakage

- Delicate condensate-proof drain pan made of the cold-rolled steel through one-time impact molding, with coating on both sides and high-quality heat-preserving materials on the exterior.
- Unique independent mounting bracket without soldering seams or joints, requiring no bolts for fixing to prevent damages to the drain pan heat-preserving layer or cold bridges.
- Tilt structure for rapid condensate water drainage.

 ALL ELECTRIC DATA ARE BEING TESTED UNDER HIGH SPEED.

Wiring Diagrams

Installation

Receiving

All units leaving the McQuay plant have been inspected to ensure the shipment of high quality products and reasonable means are utilized to properly pack the fan coil units to protect them in transit.

Carefully inspect all shipments immediately upon delivery. When damage is visible, note this fact on the carrier's freight bill and request that the carrier sends a representative to inspect the damage. This may be done by telephone or in person, but should always be confirmed in writing.

The shipment should be unpacked in the presence of the agent so that the damage or loss can be determined.

The carrier's agent will make an inspection report and a copy will be given to the consignee for forwarding to the carrier with a formal claim.

Location

Before installation, please check the following:

There must be enough space for unit installation and maintenance. Please refer to the unit's drawings and dimensions and fig.1 for the minimum distance between the unit and obstacle.

Please ensure enough space for piping connection and electrical wiring.

Please make sure that the hanging rods can support weight of the unit.

Installation

The unit is designed for concealed ceiling installation.

There are holes on the top of the unit for hanging. Please refer to Fig.1.Fig.2 and Fig.3.

Make sure that the top of the unit is level.

Insulation

- 1) Use proper insulation material only
- 2) Chilled water pipes and all parts on the pipes should be insulated
- 3) It is also necessary to insulated air ducted
- 4) Adhesive for insulation should work under range 0°F(-18°C) to 200°F(93.3°C).

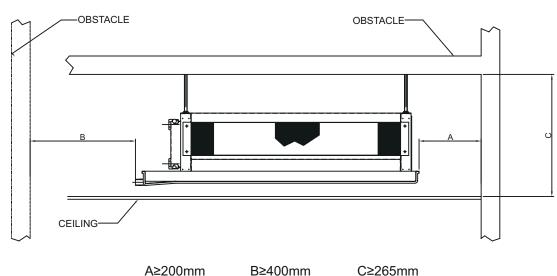

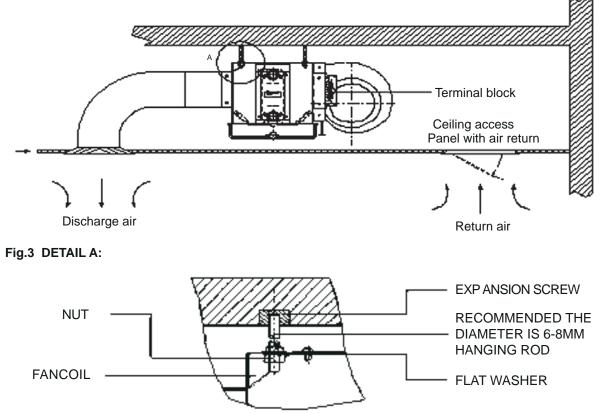

Fig.2 WITH AND WITHOUT PLENUM FORM:

Air Duct Connection

Circulatory air pressure drop should be within External Static Pressure Galvanized steel air ducts are suitable Make sure there is no leak of air.

Air duct should be fireproof, refer to concerned country national and local regulations.

Pipe Connection

Using suitable fittings as water pipe connections. Refer to the specification The water inlet is on the bottom while outlet on top.

The connection must be concealed with rubberized fabric to avoid leakage.

Drainpipe can be PVC or steel.

The suggested slope of the drainpipe is at least 1:50.

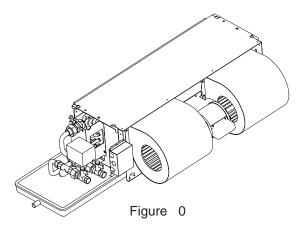

Wiring

- 1) Wiring connection must be done according to the wiring diagram on the unit.
- 2) The unit must be GROUNDED well.
- 3) An appropriate strain relief device must be used to attach the power wires to the terminal box.
- 4) A 7/8" knockout hole is designed on the terminal box for field installation of the strain relief device.
- 5) Field wiring must be complied with the national security regulations.

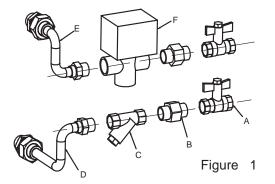

Valve Kit

The valve kit is applied for 2-pipe system. The kit consists of (refer structure figure 0):

- 2/3 way valve body is made of brass, maximum working pressure 1.6MPa.
- Electric actuator has the following specifications:
 Power supply: 220V±10%/50/60Hz (±2Hz)
 Activation: ON/OFF
- **Hydraulic kit** for the installation of the valve on the heat exchanger, complete with 2 ball valves for adjusting the water flow and for closing the water circuit when perform maintenance to the unit.
- Y-strainer protects unit from impurity, increases the service life and insolating valves.

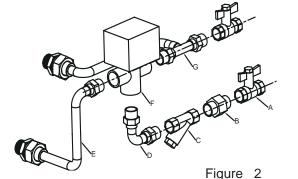

All parts of 2-way valve kit are indicated in the figure 1. (For right pipe connection unit.)

A Ball valve B Brass connector C Y-strainer D Water inlet pipe E Water outlet pipe F 2-way valve

All parts of 3-way valve kit are indicated in the figure 2. (For right pipe connection unit.)

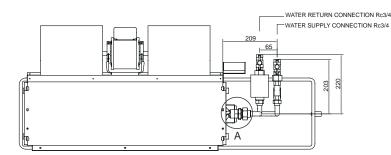

A Ball valve B Brass connector C Y-strainer D Connector pipe E Water inlet pipe F 3-way valve G Water outlet pipe

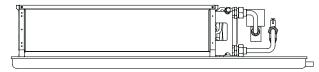

Installation

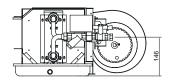

- Install the 2-way valve kit as indicated in the pictures of figure 3. (For right pipe connection unit.) As shown as detail A, firstly take apart connector, then install ① to unit with necessary sealing material. Fix ② between ① and ③. At last tighten ③, make sure all of connectors are sealed.
- 2. Install the 3-way valve kit as indicated in the pictures of figure 4. (For right pipe connection unit.) Detail is as same as 2-way valve unit.

- Where needed the connections are pre-coated with sealing material.
- The connections are not tightened for easy adjustment.
- After determining the final position of the valve kit, tighten all connections to obtain water tightness.

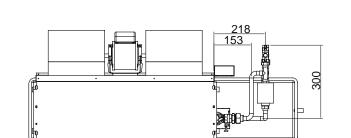

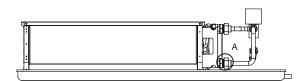

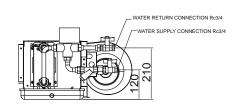

Insulation

- 1. The insulation design and materials should be complying with local and national codes and regulations.
- 2. Chilled water pipes and all parts on the pipes should be insulated.

The flow resistance of the connecting valve/hydraulic kit assembly is obtained from the following formula:

 $\triangle P_w = (Q_w/100K_v)^2$

 P_w is the flow resistance (Pa)

 Q_w is the water flow rate (m³/h)

K_v is the flow rate identified in the table

Valve Model	DN	Conncetion Type	Valve Type	KV	Shut-off Pressure Difference (MPa)
MC-FCV3335G	20	Rc3/4"	3-way Valve	3.4	0.18
MC-FCV2334G	20	Rc3/4"	2-way Valve	3.0	0.18

Pipe Connection

- 1. Using suitable fittings as water pipe connections with reference to the outline and dimensions.
- 2. The water inlet is on the bottom while outlet on top.
- 3. The connection must be concealed with rubberized fabric to avoid leakage.
- 4. Tightening torque should not be too high when connecting water pipes, in order to avoid brass deformation or water-leakage by torsion split.

Wiring

- 1. Refer to the wiring diagram of the appropriate controller.
- 2. For connection with the McQuay controller, position the water temperature probe into the appropriate position. Refer to the dedicated controller installation and operation manual.
